

## Off Site Semen Specimen Collection for Intrauterine Insemination (IUI)

A period of 2 to 3 days of abstinence (no ejaculation or intercourse) is recommended for an optimal IUI sample.

Prior to semen collection please make sure that your hands and penis are clean and free of lubricants, powders, soaps and other foreign materials. All of these items could be toxic to sperm.

The sample must be collected in the specimen cup that we provide you with.

The sample must arrive at the office within one hour after collection. When transporting the sample, keep the specimen warm (room—body temperature). To accomplish this, keep the specimen cup close to your body in upright position if it is cold outside. If the sample is too cold, it could adversely affect the semen sample.

The person bringing in the semen sample must have photo identification with them.

If you are unable to collect a specimen, please call the office and speak to the doctor about alternative treatment options.

Please complete the following information prior to your arrival at the office:

---

Male Partner's Name	Female Partner's Name	Date
Specimen collection method:		
<input type="checkbox"/> Masturbation	<input type="checkbox"/> Intercourse with withdrawal	<input type="checkbox"/> Condom <input type="checkbox"/> Other _____
Time of ejaculation: _____	Days since last ejaculation: _____	
Did any part of the sample not get into the container?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

I acknowledge that this semen sample is a product of my/my partner's body.
